

Saint Elme Active 2D[®] Lightning conductor

Excitation with Time control by impulse and sustained propagation speed

Saint Elme Active 2D[®] lightning conductor remote control tester

AFV 0100 TT

The Saint-Elme Active2D[®] lightning conductor can be tested on site, with its remote control tester (initial checking, periodic checking in compliance with **NFC 17-102** and decrees in force, maintenance, ...).

Simple and fast, the test does not require any particular operation of dismounting of the lightning conductor and can be done safely from the ground.

- Communications by radio wave
- Any electromagnetic perturbation : radio emissions only during the test
- Bi-directional Emission and reception : the Saint-Elme Active2D[®] lightning conductor and the tester are both equipped with one transmitter/receiver.

Effective working until 100 m of distance

The test guarantees that the lightning conductor is ready to work.
